

American Urological Association's Recommendations on Coding for Xiaflex

Procedure	Code Descriptor	CPT Code(s)	RVUs	
Visit 1				
Induce erection	Injection of corpora cavernosa with pharmacologic agent(s) (eg, papaverine, phentolamine)	54235	2.67	This procedure is performed to determine where the injection of Xiaflex should be administered on the penis.
Detumescence	Therapeutic, prophylactic, or diagnostic injection (specify substance or drug); subcutaneous or intramuscular	96372	0.71	If the tumescence does not detumescence on its own, then an injection of a medication to pharmacologically detumescence the penis is necessary. This code covers the injection of the medication.
Anesthetic	Not billable			An injection of a numbing agent is included in all procedures. This code does not represent an injection of numbing agent but a nerve block into the nerve bundles outside of the prostate. Most urologists will not perform this procedure.
Xiaflex	Medication code	J0775		
Injection for Peyronie disease	Injection procedure for Peyronie disease;	54200	3.21	The injection procedure has a ten day global period. In order to receive reimbursement for the second 54200 injection, the initial operative report must include documentation that an additional injection procedure will be required in the next 24-72 hours. The modifier 58 staged procedure must be appended to the second 54200 procedure.
Visit 2				
Xiaflex	Medication code	J0775		
Injection for Peyronie disease	Injection procedure for Peyronie disease;	54200 - 58	3.21	**Modifier to be used for injection visit 2 - Since injection for peyronie disease has a 10 day global period, the 58 staged procedure modifier should be used.
Visit 3				
Modeling Procedure	There is one Evaluation and Management (E&M) Service CPT code 99212 included in the ten day global period of 52400. A separate E&M visit cannot be billed during the global period.
